MG 5010  Seminar in Mathematics Education  (1-4 Credits)
The topic for the course is selected by the professor from current
developments and issues in mathematics education, such as
Mathematics for Exceptional Children, Piaget's Research, Mathematics
Assessment, and Algebra in the K-12 Curriculum. Course may be repeated
on a different topic with permission of the department chair.

MG 5220  Numbers and Operations for Elementary/Middle School
Teachers  (4 Credits)
This course focuses on advanced concepts and procedures in numbers
and operations (gr. K - 8). Mathematical topics include pre-number and
early number concepts, place value and number systems, arithmetic
operations including calculational fluency with traditional algorithms
and mental math, proportional reasoning, and the historical development
of number and number systems. Classroom activities demonstrate
how mathematical problem solving, reasoning, and communication can
be integrated in the everyday learning experiences of every student.
Building on this knowledge students design lesson plans to achieve
clear content and process objectives. Classroom discussions focus on
thinking processes, mathematical concepts, habits of mind, conceptual
understanding, and dispositions that students need in order to develop a
deep, flexible, and enduring understanding of mathematics.

MG 5230  Algebra and Functions for Elementary/Middle School
Teachers  (4 Credits)
This course focuses on advanced concepts and procedures in algebra
and functions (gr. K - 8). Mathematical topics include generalizing
patterns, different use of variables, equations and inequalities, functions
in multiple representations, modeling with functions, and historical
development of algebra and functions. Classroom activities demonstrate
how mathematical problem solving, reasoning, and communication can
be integrated in the everyday learning experiences of every student.
Building on this knowledge students design lesson plans to achieve
clear content and process objectives. Classroom discussions focus on
thinking processes, mathematical concepts, habits of mind, conceptual
understanding, and dispositions that students need in order to develop a
deep, flexible, and enduring understanding of mathematics.

MG 5240  Geometry and Measurement for Elementary/Middle School
Teachers  (4 Credits)
This course focuses on advanced concepts and procedures in geometry
and measurement (gr. K - 8). Mathematical topics include features
and classifications of 2-d and 3-d shapes, area, volume, surface area,
congruence, similarity, proofs of selected theorems, and the historical
development of geometry. Classroom activities demonstrate how
mathematical problem solving, reasoning, and communication can
be integrated in the everyday learning experiences of every student.
Building on this knowledge students design lesson plans to achieve
clear content and process objectives. Classroom discussions focus on
thinking processes, mathematical concepts, habits of mind, conceptual
understanding, and dispositions that students need in order to develop a
deep, flexible, and enduring understanding of mathematics.

MG 5250  Data Analysis and Probability for Elementary/Middle School
Teachers  (4 Credits)
This course focuses on advanced concepts and procedures in data
analysis and probability (gr. K - 8). Mathematical topics include data
representation and interpretation, data analysis, classical definition
of probability, odds, expected value, and historical development of
statistical and probabilistic ideas. Classroom activities demonstrate
how mathematical problem solving, reasoning, and communication can
be integrated in the everyday learning experiences of every student.
Building on this knowledge students design lesson plans to achieve
clear content and process objectives. Classroom discussions focus on
thinking processes, mathematical concepts, habits of mind, conceptual
understanding, and dispositions that students need in order to develop a
deep, flexible, and enduring understanding of mathematics.

MG 5320  Number, Quantity, and Algebra for Middle/Secondary School
Teachers  (4 Credits)
This course focuses on algebraic thinking and concepts central to the
Common Core State Standards in Mathematics [CCSSM]. Specifically, the
mathematical content of the course aligns with the CCSSM standards
(gr. 5-12) in number, quantity, and algebra. Classroom activities explore
this mathematical content and the Standards for Mathematical
Practice in CCSSM deepening students' understanding. The activities
also demonstrate how mathematical practices can be integrated in the
everyday learning experiences of every student. Building on this
knowledge students design lesson plans to achieve clear content and
process objectives. Classroom discussions focus on thinking processes,
mathematical concepts, habits of mind, conceptual understanding, and
dispositions that students need in order to develop a deep, flexible, and
enduring understanding of mathematics.

MG 5330  Functions and Modeling for Middle/Secondary School
Teachers  (4 Credits)
This course focuses on functions and modeling concepts central to the
Common Core State Standards in Mathematics [CCSSM]. Specifically, the
mathematical content of the course aligns with the CCSSM standards
(gr. 5-12) in functions and modeling. Students will develop
conceptual understanding and confidence working with functions and
modeling. Activities are designed to demonstrate how the Standards
for Mathematical Practice in CCSSM can be integrated in the everyday
learning experiences of every student. Class discussions are centered
on thinking processes, habits of mind, conceptual understanding, and
dispositions that students need in order to develop a deep, flexible, and
enduring understanding of mathematics.

MG 5340  Geometry for Middle/Secondary School Teachers  (4 Credits)
This course focuses on Euclidean geometry concepts central to the
Common Core State Standards in Mathematics [CCSSM]. The
mathematical content of the course aligns with the CCSSM standards
(gr. 5-12) in geometry. Students will develop conceptual understanding of
geometric properties and relationships, applying and analyzing concepts,
procedures, and proofs. Activities are designed to demonstrate how the
Standards for Mathematical Practice in CCSSM can be integrated in the
everyday learning experiences of every student. Class discussions are
centered on thinking processes, habits of mind, conceptual
understanding, and dispositions that students need in order to develop a
deep, flexible, and enduring understanding of mathematics.
MG 5350  Statistics and Probability for Middle/Secondary School Teachers (4 Credits)
This course focuses on statistics and probability concepts central to the Common Core State Standards in Mathematics [CCSSM]. The mathematical content of the course aligns with the CCSSM standards (gr. 5-12) in statistics and probability. Students will develop conceptual understanding and fluency in statistical concepts, data analysis, and probability. Activities are designed to demonstrate how the Standards for Mathematical Practice in CCSSM can be integrated in the everyday learning experiences of every student. Class discussions are centered on thinking processes, habits of mind, conceptual understanding, and dispositions that students need in order to develop a deep, flexible, and enduring understanding of mathematics.

MG 5760  Topics in Mathematics for Elementary/Middle School Teachers (1-4 Credits)
Topics for this course can vary, but may focus on one or more of the following ideas: problem solving, logic and proof, set theory and Venn diagrams, calculus notions, number systems, and mathematical modeling. A standard text on the topic will be used when appropriate. Students may repeat the course with a different topic as its focus with the permission of the department chair.

MG 5820  Topics in Number Theory for Middle/Secondary School Teachers (2-4 Credits)
Topics in this course vary, but may focus on one or more of the following topics, which are traditionally found in the middle/secondary mathematics curriculum, such as prime numbers, mathematical induction, the Euclidean algorithm, divisibility and complex numbers. Other topics explored may include Peano's Postulates, Fermat's Last Theorem and the Well-Ordering Principle. A standard text on the topic will be used when appropriate. Students may repeat the course with a different topic as its focus with the permission of the department chair.

MG 5830  Topics in Discrete Mathematics for Middle/Secondary School Teachers (2-4 Credits)
Topics in this course vary, but may focus on one or more of the following: logic, proof, set theory and Venn diagrams, algorithmic thinking, Boolean Algebra, mathematical induction, recursion relations, graph theory and networking, and relating those ideas to teaching discrete mathematics in grades 7-12. Students may repeat the course with a different topic as its focus with the permission of the department chair.

MG 5840  Topics in Geometry for Middle/Secondary School Teachers (2-4 Credits)
Topics for this course can vary, but may focus on one or more of the following: history of Euclidean and non-Euclidean geometry, Euclidean geometries, non-Euclidean geometries, Euclidean geometries in the plane, polyhedra, analytic and transformational geometry, projective geometry, fractals, geometry in the real world, and topology. Investigations may use computer software and Internet resources. Students may repeat the course with a different topic as its focus with permission of the department chair.

MG 5850  Topics in Statistics/Probability for Middle/Secondary School Teachers (2-4 Credits)
Topics for this course can vary, but may focus on one or more of the following: techniques and content for teaching statistics and probability at the secondary level; organizing and displaying univariate data, stem and leaf; box and scatter plots; regression analysis, linear programming, random sampling; confidence intervals and tests of significance; experimental design; discrete and continuous probability functions; and experimental and theoretical probability. Students may explore these ideas through hands-on activities, computer software, or graphing calculators. Students may repeat the course with a different topic as its focus with the permission of the department chair.

MG 5860  Topics in Mathematics for Middle/Secondary School Teachers (1-4 Credits)
Topics for this course can vary, but may focus on one or more of the following ideas: problem solving, logic and proof, set theory and Venn diagrams, topology, real analysis, complex analysis and mathematical modeling. Standard text on the topic will be used when appropriate. Students may repeat the course with a different topic as its focus with the permission of the department chair.

MG 5910  Independent Study (1-4 Credits)
An individual study project determined to be of value to students and the Mathematics Department. Students present a talk concerning some portion of their study to a department colloquium during the term. Consent of a faculty supervisor and department chair is required.

MG 5960  Mathematics Teaching Internship (1-9 Credits)
This course is the culminating field-based teaching experience for teacher certification students in the Master of Education (MEd) in mathematics or Post Baccalaureate, Middle or Secondary Education programs. Students must have completed early field-based experiences and all coursework for the certification, including any required undergraduate competencies, before taking this course. Teacher candidates pursuing an internship will gradually assume responsibility for a full range of teaching activities encountered in a school situation. Internship provides an opportunity for demonstrating the appropriate professional skills, attitudes and dispositions essential for successful teaching. The teaching field experience is conducted under the supervisory guidance of mentor teacher and university supervisor. An online seminar compliments the experience. Certification candidates who are not pursuing the M.Ed. must have submitted passing scores on the Core Academic Skills for Educators before enrolling. All candidates who will be required to take Praxis II for NH Certification must make arrangements for that testing independently. Prerequisite(s): Completion of all other program requirements for certification by the beginning of the internship semester; permission of the Coordinator of Teacher Certification and Clinical Experiences; and Mathematics Department Program Coordinator.
