ANTHROPOLOGY (ANDI)

ANDI 1205  Artifacts, Customs & Fossils: Studying Humans through Anthropological Perspectives (4 Credits)
Anthropology brings insights into humankind’s past, present and future. We will explore what it means to be human through the perspectives and methods of linguists, ethnographers, biological anthropologists, and archaeologists. You will understand the advantages of examining contemporary issues through multiple scientific methods and how doing so can provide a holistic outlook on the diversity of human experience. Not open to students who have earned credit for ANDI 1200. (SIDI)

ANDI 1300  Ancient and Experimental Technology (3 Credits)
Experimental Archaeology provides an intensive immersion into technologies of prehistoric or pre-industrial cultures. Students will be exposed to a selection of readings regarding experimental recreations of several key classes of ancient material culture. Students will engage in hands-on projects to recreate ancient technologies using only the materials and implements that would have been available to a pre-industrial culture.

ANDI 2205  The Science of Archaeology (4 Credits)
Archaeology is the study of the past. It uses a variety of scientific methods to better understand how cultures change and adapt in response to both natural and cultural stimuli. Explores archaeological field and laboratory techniques, the analysis of artifacts, and all of the hands-on approaches that are necessary to reconstruct past cultures using the fragmentary remains in the archaeological records. Not open to students who have earned credit for ANDI 2200. Falls and Springs. (SIDI)
